

Batch ID: 68[CS/SCSL-M/68/01]		(MODULE- 01)	Date:29/10/25
Name: Sumaiya Akter		Obtained Marks:	Time: 10:30
Student ID:1291887			Full Marks: 50

Employee Management

1.Create a 3NF database which will have following Data with a Data File and a Log File by writing SQL script as follows:Database name: EmployeeDB, Datafile name : EmployeeDB_Data_1 , LogFile Name: EmployeeDB_Log_1, Location: Default Database file location, Size(Datafile : 25 MB , LogFile: 2 MB), Maximum Size(Datafile : 100 MB , LogFile: 25 MB), File Growth (Datafile : 5% , LogFile: 1%). (10)

Employee ID	Employee Name	Salary	Department Name	Department No	Designation ID	Work Hour	Project Name	Budget
201	Sawda Akter	20000	Sales	104	SO	90	Customer Relationship Management	150000
202	Sadik Islam	21000	HR	102	Executive	40	Office Staff Management System	100000
203	Jannatul Ferdous	15000	IT	105	Sr. Engineer	80	Cyber Security Portal	90000
204	Zerin Akter	18000	HR	106	Sr. Executive	50	Employee Management System	80000
205	Marufa Munjuri	25000	IT	101	Developer	70	Network Automation System	80000
206	Joha Khan	15000	Finance	103	GM	60	Pensions System	80000

2. Insert Records into tables using Script.
3. Write a delete query for any one table of your project.
4. Write an update query for any one table of your project..
5. How to use a SELECT INTO statement.
6. Write a script to Create a table.
7. Write a script to delete a table.
8. Write a script to delete a column.
9. Write a join query to retrieve department wise project information using Group By and Having Clause
10. Write a sub-query to show all the information of Project Pensions System.
11. Create a view to show all the information in a meaning full order where the department is - Information Technology.
12. Create stored procedures to insert, update, delete data for any one of the table of your database and show use of output parameter.
13. Create a Non Clustered Index in any one of the table
14. Create a Scalar Function to get Department wise total project budget.
15. Create trigger on Insert, update, delete of any one table of you database.
16. Use statement of transaction in your script.
17. Create a Table valued Function to get Department wise detail information.
18. Show process of handling error.
19. Create a CTE.
20. Create a simple Case and a Search Case
21. Create a Cursor to insert data into any one table of you database.
22. Write NTILE() function to distribute rows of a partition into a specified number 2,3 and 4.

23. Create a new table and set merge for any one table of you project.
- 24.Example of IF and CHOOSE with my table.
- 25.Example of ISNULL.
- 26.Ranking functions (ROW_NUMBER, RANK, DENSE_RANK).
- 27.Analitic functions (FIRST_VALUE, LAST_VALUE, LEAD, LAG, PERCENT_RANK).
- 28.Example Grouping sets.
- 29.Example of ANY, ALL, SOME.
30. Example of ALTER, CREATE, DROP table.
31. example a nested/savepoint transaction
- 32.Give an example of correlated subquery
33. Give an example of over clause
34. Give an example of EXISTS operator
35. .Create a view that shows all employee information along with department, project, and designation details.
36. Create a View to show all employee,department, and project details.
37. Give an example of EXISTS operator
- 38.Changing date and time format with CAST and CONVERT
